

SAHAN HANSAJA

Software Engineer Intern | Full-Stack Developer

Mathugama, Sri Lanka | +94 71 773 5442 | sahanhansaja026@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Software Engineering undergraduate with hands-on experience in full-stack, mobile, and backend development using Flutter, React, FastAPI, Node.js, and .NET. Skilled in building real-time systems, REST APIs, and machine learning-based applications with proven results on large datasets. Currently contributing as an AI Fullstack Engineer Intern at ASTAKON LABS. Seeking a Software Engineer Intern or Junior Software Engineer role to contribute to scalable, production-ready software solutions.

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, TypeScript, Python, Dart, Java, C#, C++, C
- **Frameworks & Libraries:** React, React Native, Flutter, FastAPI, Node.js, Express.js, Next.js, .NET Framework
- **Machine Learning:** scikit-learn, Random Forest, NumPy, Matplotlib, Pandas, TF-IDF, NLP
- **Databases:** PostgreSQL, Firebase Realtime Database
- **Tools & Technologies:** Git, Docker, REST APIs, Postman, Firebase, Computer Vision (YOLO)

WORK EXPERIENCE

AI Fullstack Engineer Intern (Part-Time, Remote)

February 2026 – Present

ASTAKON LABS – Subsidiary of Pahanmi Group

- Build AI-based web applications supporting both frontend and backend implementation.
- Assist with machine learning model integration, data preprocessing, and REST API development.
- Participate in testing, deployment workflows, and technical documentation within a remote team environment.

PROJECTS

Smart Parking System

May – July 2025

Technologies: Python, FastAPI, YOLO, PostgreSQL, Computer Vision, REST APIs

- Architected a computer-vision-powered smart parking system using YOLO and FastAPI, reducing manual parking monitoring effort by 100% through full automation across 3+ monitored zones.
- Boosted parking space detection accuracy by approximately 25% and facilitated real-time availability updates via REST APIs.

Sentiment Analysis System

May – July 2025

Technologies: Python, scikit-learn, Pandas, TF-IDF, NLP | Dataset: 5,000+ text samples

- Built a Python-based machine learning model to classify text as positive, negative, or neutral.
- Enhanced automated feedback analysis efficiency by ~40% through NLP preprocessing and TF-IDF feature extraction, cutting manual review time on sample datasets.

Smart Attendance & Course Recommendation System

December 2024 – January 2025

Technologies: Python, FastAPI, PostgreSQL, Machine Learning, scikit-learn

- Built a machine learning-based attendance tracking and course recommendation system trained on 20,000+ records.
- Achieved 68% accuracy on a held-out test set through feature engineering and model optimization.

Task Management App

February – March 2025

Technologies: Flutter, Firebase, Mobile Application Development | Platforms: iOS & Android

- Delivered a cross-platform Flutter task management application using Firebase Realtime Database, deployed on both iOS and Android from a single codebase.
- Achieved real-time task synchronization with sub-second latency across multiple devices, eliminating data inconsistency for all connected users.
